

EUVIP 2026 Student Session: Detailed Submission Guidelines

To ensure fairness and avoid desk rejection, all student contributions must strictly adhere to the formatting guidelines. Submissions for both tracks must be **exactly 2 pages** in length and formatted according to the standard IEEE double-column conference template.

For more details on paper types, you can review the [IEEE Conference Paper Guidelines](#).

Track A: Technical Extended Abstract (2 Pages)

This track requires an extended abstract format acting as a high-level summary of your specific technical results or preliminary findings. A successful submission should follow this scannable structure:

- **Header & Title:** A concise, specific title. Include the names, affiliations, and email addresses of all contributors.
- **Abstract (100–200 words):** A standalone paragraph summarizing the entire paper, including the problem, research conducted, key results, and major conclusions.
- **Introduction & Background:** State why your research topic matters. Briefly summarize existing work to highlight the research gap, and state your objective or hypothesis.
- **Methodology:** A summarized description of your experimental approach, materials, or theoretical framework so your work can be understood and replicated.
- **Results & Discussion:** Summarize the main data and outcomes rather than presenting raw datasets. Include 1-2 well-labeled visuals (charts, graphs, or images) that support your most important conclusions.
- **Conclusion & Future Work:** State how your results directly answer your hypothesis, the implications for your field, and what future research is needed.
- **References:** A brief, numbered list of essential literature cited in your text (3-5 key sources formatted in standard IEEE style).

Track B: PhD Thesis Description (2 Pages)

This track serves as a concise, peer-reviewed overview of your ongoing PhD research. You can see a formatting example [EUVIP2026_TrackB_Formatting_Sample.pdf](#). Submissions should include:

- **Title, Author & Supervisors:** A descriptive title, your name, your supervisors' names, and institutional affiliations.
- **Abstract (100-200 words):** A self-contained summary stating the overarching problem, your method, key findings (or expected outcomes), and implications.
- **Motivation:** Establish the background and explain why this research area matters to the EUVIP community.
- **Problem Statement and Hypothesis:** Clearly define the specific research gap, limitations of current state-of-the-art approaches, and the core hypothesis of your thesis.

- **Research Objectives / Methodology:** Break down your overarching goal into actionable, measurable research objectives. Briefly explain the methodology or tools you will use to achieve them.
- **Contribution and Impact:** Summarize your preliminary results (if any), the expected core contributions of your PhD, and how they will impact the broader field.
- **References:** A brief, numbered list of essential citations formatted in standard IEEE style (3-5 key sources).

Actionable Submission Checklist

Before submitting your paper to the Microsoft CMT portal, ensure you complete the following:

1. Download the [official IEEE Manuscript Templates](#) to format your fonts, margins, and column layouts correctly. Do not alter the margins or spacing to fit more text.
2. Ensure your submission directly references the themes and keywords relevant to EUVIP 2026. Keep your writing direct and avoid unnecessary filler.
3. Remove all template instructions and guidance text before finalizing the document.
4. Your submission must not exceed 2 pages, inclusive of all figures, acknowledgments, and references.
5. The review process for the Student Session **Track A** is **double-blind**. Please ensure your names and institutional affiliations are fully anonymized in your submitted PDF.
6. Export and submit the final file in **PDF format** via the Microsoft CMT portal.
